(54) Title: INTELLIGENT ADJUSTABLE VENTILATION FAN SYSTEM

(57) Abstract: The present invention discloses a smart device used for airconditioning ,especially in crowded places wherein virus transmission is more probable.An electronis sensor is devised on the device which detects the contamination and concentrates on that especial place and ventitalize, a changeable duct is installed to the device which pulls out the polluted air to the outside.This device is so flexible , low-consuming and benefits from the ability to move easily which gives it the ability to ventilize different places by consuming the least amount of power either by using electricity or saved charge
